

Please see attached map and below list for updates on CWD for the province. So far, about 800 animals have been tested (specific sample sizes to be provided at the end of the testing period) with a grand total of 87 positives (68 MD, 18 WTD, and 1 Elk). This brings us to 5 new CWD positive WMZs for the year (44, 39, 7W, 3, 1). Positives are comprised of hunter killed animals (63 positives in total) and diagnostics (samples provided by COs; 23 positives in total), and one undetermined (information still lacking). Age of animals are similar to that provided earlier – most positives were 3.5-4 years of age, ranging 1.5 years to 10.5 years of age.
